SUMMARY

Frontend Developer with 2+ years of experience building responsive and scalable web and mobile applications using React.js and React Native. Skilled in state management, real-time features, and production deployment. Experienced in API integration, AI chatbot solutions, and cloud-based hosting. Adept at performance optimization and agile team collaboration.

PROFESSIONAL EXPERIENCE

React Developer — Adroid IT Solutions

(Feb 2025 – Present)

- Spearheaded frontend development of multiple mobile and web products, achieving improved responsiveness and user retention.
- Integrated AI chatbot & real-time notification systems, boosting user engagement and reducing manual support.
- Collaborated with backend teams on Node.js, KeystoneJS and Laravel integrations, enhancing system reliability and data flow.

Frontend Developer (React Native) — AppCrates

(July 2024 – Feb 2025)

- Built responsive web and mobile UI components with React.js and React Native, improving customer satisfaction metrics.
- Streamlined state management and component architecture to reduce code complexity and accelerate feature delivery.
- Partnered with cross-discipline teams to implement new features and ensure scalable & maintainable solutions..

React Developer — Al-Salam Tech House

(Mar 2023 – Mar 2024)

- Developed CRM web applications and a ride-booking mobile app using React Native.
- Focused on performance optimization, UI/UX enhancements, and efficient state management.
- Collaborated with teams to implement new features and ensure scalable solutions.

TECHNICAL SKILLS

Frontend: React.js, React Native, Next.js, TypeScript, Tailwind CSS, Ant Design, MUI

State Management: Redux Toolkit, Redux Saga, Redux Thunk, React Query, Zustand, Context API

APIs & Real-time: Socket.io, Pusher, Supabase

Backend Familiarity: Node.js, KeystoneJS, Laravel, Express.js (bug fixing, API integration)

CI/CD & Deployment: Google Play Store, Vercel, Netlify, Expo EAS

Cloud Services: Firebase Functions, AWS Amplify, Supabase

Payment Gateway: Stripe

Folder Structures: MVC, Atomic Design

Tools & Dev: GitHub, GitLab, Bitbucket, Jira, Trello, Zoho

EDUCATION

Bachelor of Science in Information Technology — University of the Punjab

(Sep 2018 – Aug 2022)

- Major: Web Application Development
- Final Year Project: CRM web application using PHP Laravel, SQL, and Bootstrap

ADDITIONAL INFORMATION

Languages: English, Urdu

Additional Skills: WordPress, Microsoft Office Suite

PROJECTS

Kroolo – Work Management Mobile Application

Description: A Slack- and Trello-inspired mobile app designed for team communication, task tracking, and collaboration.

Key Features:

- Real-time chat powered by Socket.io
- Task creation, assignment, and progress tracking
- Role-based access control and team management
- Structured with MVC architecture for scalability
- **Role:** Built the entire frontend, integrated real-time communication, and implemented state management with Redux-Saga.
- **Tech Stack:** React Native, TypeScript, Redux-Saga, Socket.io

ChirpByte – Customer Support Mobile Application

Description: A customer support app enabling real-time chat integration across WhatsApp, Facebook, Instagram, and website visitors.

Key Features:

- Unified inbox for handling multi-platform conversations
- Real-time messaging powered by Socket.io and Pusher
- Live visitor tracking and detailed chat history for customer insights
- Optimized state management using Redux Toolkit
- **Role:** Developed live chat modules, implemented visitor tracking, and managed real-time synchronization.
- **Tech Stack:** React Native, Redux Toolkit, Socket.io, Pusher

Skip2Beat – Fitness Mobile Application

Description: A fitness app that helps users perform cardio exercises with rep tracking and motivational music playback.

Key Features:

- Real-time rep counting and workout tracking
- Integrated music playback for motivation
- Google Maps integration to find nearby users
- Social features: friend requests, chat, and viewing rep points
- **Role:** Built frontend modules, implemented real-time communication and integrated Google Maps.
- **Tech Stack:** React Native, Socket.io, Google Maps.

AI Salaam Tourism – Tourist & Events Booking Web Application

Description: A web platform for booking tours and events in Dubai, offering personalized experiences for families and solo travelers with child safety features.

Key Features:

- Tour and event booking with category-based filtering
- Family and single traveler modes
- Admin panel for CRUD operations
- Smooth animations and responsive UI using Framer Motion and Tailwind CSS
- **Role:** Built the frontend using Next.js, integrated APIs with Axios, and managed state via Redux Toolkit.
- **Tech Stack:** Next.js, Redux Toolkit, Tailwind CSS, Framer Motion

Ace Live – Live Streaming & Interactive Chat Web Application

Description: A live streaming platform where users can watch broadcasts, chat in real time, and interact with streamers who can manage or promote participants.

Key Features:

- Real-time chat with admin moderation (promote/ban users)
- OBS integration for live streaming via AWS IVS
- Real-time data and GraphQL mutation handling with Supabase
- Scalable backend with KeystoneJS and PostgreSQL
- **Role:** Enhanced backend functionality in KeystoneJS, built real-time features, and developed frontend in React with Object StyleSheet styling.
- **Tech Stack:** React.js, KeystoneJS, PostgreSQL, Supabase, GraphQL, AWS IVS, OBS
